INTRUSION

CyberArk Singers: OT/ICS Threat Hunt

Detecting ICS/control-system, Active Directory, and cloud threats, adversary emulation, and building a world-class OT/ICS threat hunting capability. From zero to hero.

Speaker 1 - Alex Ivkin
Title - Senior Director, Cyber Security Engineering
Company - CyberArk

Speaker 2 - Shai Morag
Title - Director, Cyber Security Engineering
Company - CyberArk

Agenda Overview

8 hr schedule

- Introductions & Why OT/ICS Matters
- Module 1: Threat Hunting 101
- Module 2: Active Directory Threat Hunting
- Module 3: Cloud Threat Hunting
- Module 4: Threat Hunting in OT/ICS Environments
- Module 5: Threat Hunting Tools and Platforms
- Module 6: Threat Hunting Exercises
- Module 7: Building a Threat Hunting Program

Hands-On Exercises

- Module 1: Hypothesis Development
- Module 2: Active Directory Threat Hunting
- Module 3: Cloud Threat Hunting
- Module 4: OT/ICS Threat Hunting
- Module 5: Tool Deployment & Configuration
- Module 6: Threat Hunting Exercises
- Module 7: Program Development

Prerequisites

- Basic understanding of networking concepts
- Familiarity with Windows and Linux operating systems
- Basic knowledge of cybersecurity principles
- Laptop with administrative access
- Virtual machine software (VMware Workstation/Player or VirtualBox)
- Minimum 16GB RAM recommended
- Internet access for cloud exercises

Learning Objectives

By the end of this training, you will be able to:

- Develop and execute threat hunting hypotheses
- Hunt for threats in Active Directory environments
- Detect cloud-based attacks and misconfigurations
- Understand OT/ICS protocols and their vulnerabilities
- Hunt for threats in industrial control systems
- Select and configure threat hunting tools
- Design exercises to test detection capabilities
- Build a sustainable threat hunting program

Why OT/ICS Matters

$50B
Global cost of ransomware attacks in 2021

300%
Increase in OT/ICS attacks since 2018

$4.5M
Average cost of a single OT/ICS incident

60%
Of OT/ICS organizations experienced a breach in the past 3 years

$1M
Cost of a single hour of downtime for a manufacturing plant

70%
Of OT/ICS attacks target critical infrastructure

$2.5M
Average ransom demand in OT/ICS attacks

45%
Of OT/ICS attacks result in physical damage

$10M
Cost of a major OT/ICS incident including recovery and lost production

80%
Of OT/ICS organizations lack adequate threat detection capabilities

$3.5M
Average cost of a data breach in OT/ICS environments

90%
Of OT/ICS attacks could have been prevented with basic security controls

Module 1: Threat Hunting 101

Duration: 60 minutes | Level: Beginner

Learning Goals

- Understand the threat hunting lifecycle and methodology
- Develop effective hypotheses for threat hunting
- Learn to use the MITRE ATT&CK framework
- Practice hypothesis development exercises

Hands-On Exercise: Hypothesis Development

Scenario: You are a threat hunter at a financial services company. Your organization has recently experienced a phishing campaign that resulted in several compromised user accounts. Your task is to develop hypotheses for hunting potential lateral movement and persistence mechanisms.

Step 1: Review the MITRE ATT&CK framework

Navigate to the MITRE ATT&CK Enterprise Matrix and review the following techniques:

- T1078 - Valid Accounts
- T1021 - Remote Services
- T1053 - Scheduled Task/Job
- T1547 - Boot or Logon Autostart Execution

Step 2: Develop hypotheses

Create at least 3 hypotheses using the following format:

```
If [adversary technique] is present, then we should observe [data source] showing [anomalous behavior]
```

Example:

```
If T1078 (Valid Accounts) is present, then we should observe Windows Security Event Logs showing logon events from unusual geographic locations or at unusual times
```

Step 3: Document your hypotheses

Use the template below to document your hypotheses:

Hypothesis	Technique	Data Source	Expected Behavior

Step 4: Prioritize your hypotheses

Rank your hypotheses based on:

- Likelihood of occurrence
- Impact if successful
- Ease of detection

Step 5: Share and discuss

Be prepared to present your hypotheses to the group and discuss your reasoning.

- [ ] Hypothesis 1 documented
- [ ] Hypothesis 2 documented
- [ ] Hypothesis 3 documented
- [ ] Hypotheses prioritized
- [ ] Ready to present

Module 2: Active Directory Threat Hunting

Duration: 90 minutes | Level: Intermediate

Learning Goals

- Understand Active Directory attack techniques
- Hunt for Kerberoasting and AS-REP roasting
- Detect DCSync and DCShadow attacks
- Identify suspicious group policy modifications

Hands-On Exercise: Kerberoasting Detection

Scenario: Your organization has been targeted by a sophisticated attacker who has gained initial access to a workstation. You suspect they are attempting to escalate privileges using Kerberoasting.

Step 1: Enable Kerberos logging

Ensure the following Windows Event IDs are being collected:

- Event ID 4769 - A Kerberos service ticket was requested
- Event ID 4770 - A Kerberos service ticket was renewed

Step 2: Hunt for suspicious service ticket requests

Use the following query to identify potential Kerberoasting activity:

```
SELECT * FROM SecurityEvent
WHERE EventID = 4769
AND TicketEncryptionType = "0x17"
AND ServiceName NOT LIKE "$"
```

Step 3: Analyze the results

Look for:

- Multiple service ticket requests from a single user
- Requests for service accounts with SPNs
- Requests using RC4 encryption (0x17)

Step 4: Create a detection rule

Develop a detection rule that alerts when:

```
IF count(EventID = 4769 AND TicketEncryptionType = "0x17") > 5 IN 5 minutes
THEN alert "Potential Kerberoasting Activity"
```

- [ ] Kerberos logging enabled
- [ ] Query executed successfully
- [ ] Suspicious activity identified
- [ ] Detection rule created
- [ ] Rule tested and validated

Pro Tip: Consider implementing honeypot service accounts with SPNs to detect Kerberoasting attempts. These accounts should never be used legitimately, so any activity is suspicious.

Module 3: Cloud Threat Hunting

Duration: 90 minutes | Level: Intermediate

Learning Goals

- Understand cloud attack techniques
- Hunt for compromised cloud credentials
- Detect misconfigurations and privilege escalation
- Monitor cloud infrastructure changes

Hands-On Exercise: AWS CloudTrail Analysis

Scenario: Your organization uses AWS for its cloud infrastructure. You've received an alert that an IAM user's credentials may have been compromised. Investigate the activity.

Step 1: Enable CloudTrail logging

Ensure CloudTrail is enabled for all regions and that logs are being delivered to an S3 bucket.

Step 2: Hunt for suspicious API calls

Use the following query to identify potentially malicious activity:

```
SELECT eventTime, eventName, sourceIPAddress, userIdentity.arn
FROM cloudtrail_logs
WHERE eventName IN ("CreateUser", "AttachUserPolicy", "CreateAccessKey")
AND userIdentity.type = "IAMUser"
```

Step 3: Investigate unusual activity

Look for:

- API calls from unusual IP addresses
- Creation of new IAM users or access keys
- Attachment of overly permissive policies
- Activity outside normal business hours

Step 4: Create a detection rule

Develop a detection rule that alerts when:

```
IF eventName = "CreateAccessKey" AND userIdentity.type = "IAMUser"
THEN alert "Potential Credential Compromise"
```

- [ ] CloudTrail logging verified
- [ ] Query executed successfully
- [ ] Suspicious activity identified
- [ ] Detection rule created
- [ ] Rule tested and validated

Pro Tip: Use AWS GuardDuty to supplement your threat hunting efforts. It can detect many of these activities automatically.

Module 4: Threat Hunting in OT/ICS Environments

Duration: 120 minutes | Level: Advanced

Learning Goals

- Understand OT/ICS protocols and their vulnerabilities
- Hunt for threats in industrial control systems
- Detect unauthorized changes to PLC logic
- Monitor for anomalous network traffic in OT environments

Hands-On Exercise: Modbus Traffic Analysis

Scenario: You are monitoring a water treatment facility's OT network. You've noticed some unusual Modbus traffic and need to investigate whether it's malicious.

Step 1: Capture Modbus traffic

Use Wireshark or tcpdump to capture Modbus traffic on port 502.

Step 2: Analyze Modbus function codes

Look for unusual function codes:

- Function code 5 (Write Single Coil)
- Function code 6 (Write Single Register)
- Function code 15 (Write Multiple Coils)
- Function code 16 (Write Multiple Registers)

Step 3: Hunt for suspicious patterns

Use the following Wireshark filter:

```
modbus.func_code == 5 or modbus.func_code == 6 or modbus.func_code == 15 or modbus.func_code == 16
```

Step 4: Investigate anomalies

Look for:

- Write operations from unauthorized IP addresses
- Write operations outside maintenance windows
- Unusual register values being written

- [ ] Modbus traffic captured
- [ ] Function codes analyzed
- [ ] Suspicious patterns identified
- [ ] Investigation completed
- [ ] Findings documented

Pro Tip: Consider implementing a Modbus firewall to restrict write operations to authorized devices only.

Module 5: Threat Hunting Tools and Platforms

Duration: 90 minutes | Level: Intermediate

Learning Goals

- Understand the capabilities of threat hunting platforms
- Configure and deploy threat hunting tools
- Integrate threat hunting tools with existing security infrastructure
- Develop custom queries and detection rules

Hands-On Exercise: Elastic Security Setup

Scenario: Your organization has decided to implement Elastic Security for threat hunting. You need to set up the platform and configure it to collect and analyze security data.

Step 1: Deploy Elastic Security

Follow the official documentation to deploy Elastic Security in your environment.

Step 2: Configure data sources

Configure the following data sources:

- Windows Event Logs
- Sysmon
- Network traffic
- Cloud logs

Step 3: Create detection rules

Create detection rules for the following:

- Suspicious PowerShell activity
- Lateral movement
- Privilege escalation
- Data exfiltration

Step 4: Develop custom queries

Develop custom queries to hunt for specific threats.

- [ ] Elastic Security deployed
- [ ] Data sources configured
- [ ] Detection rules created
- [ ] Custom queries developed
- [ ] Platform tested and validated

Pro Tip: Use the Elastic Common Schema (ECS) to normalize your data for easier analysis.

Module 6: Threat Hunting Exercises

Duration: 120 minutes | Level: Advanced

Learning Goals

- Apply threat hunting skills in a realistic scenario
- Work collaboratively to investigate a complex incident
- Develop and execute a threat hunting plan
- Document findings and recommendations

Hands-On Exercise: Capture the Flag

Scenario: You are a member of a threat hunting team that has been tasked with investigating a potential breach. You have been given access to a network and a set of logs. Your goal is to find the flag.

Step 1: Review the logs

Review the logs to identify any suspicious activity.

Step 2: Develop a hypothesis

Develop a hypothesis about what the attacker is doing.

Step 3: Hunt for the flag

Hunt for the flag using the tools and techniques you have learned.

Step 4: Document your findings

Document your findings and recommendations.

- [ ] Logs reviewed
- [ ] Hypothesis developed
- [ ] Flag found
- [ ] Findings documented
- [ ] Recommendations made

Pro Tip: Work collaboratively with your team to share knowledge and ideas.

Module 7: Building a Threat Hunting Program

Duration: 90 minutes | Level: Advanced

Learning Goals

- Understand the components of a threat hunting program
- Develop a threat hunting maturity model
- Create a threat hunting roadmap
- Measure the effectiveness of a threat hunting program

Hands-On Exercise: Program Development

Scenario: You are tasked with building a threat hunting program for your organization. You need to develop a plan that includes people, process, and technology.

Step 1: Assess your current state

Assess your current state of threat hunting maturity.

Step 2: Develop a roadmap

Develop a roadmap for improving your threat hunting capabilities.

Step 3: Define metrics

Define metrics for measuring the effectiveness of your program.

Step 4: Present your plan

Present your plan to the group.

- [ ] Current state assessed
- [ ] Roadmap developed
- [ ] Metrics defined
- [ ] Plan presented
- [ ] Feedback received

Pro Tip: Start small and build on your success.

Appendix A: Collection of Presentations

Day 1 Presentations

Time	Topic	Presenter
09:00	Introductions & Why OT/ICS Matters	Alex Ivkin
09:30	Module 1: Threat Hunting 101	Alex Ivkin
10:30	Module 2: Active Directory Threat Hunting	Shai Morag
12:00	Module 3: Cloud Threat Hunting	Shai Morag

Day 2 Presentations

Time	Topic	Presenter
09:00	Module 4: Threat Hunting in OT/ICS Environments	Alex Ivkin
10:30	Module 5: Threat Hunting Tools and Platforms	Shai Morag
12:00	Module 6: Threat Hunting Exercises	Alex Ivkin & Shai Morag
14:00	Module 7: Building a Threat Hunting Program	Alex Ivkin

Additional Resources

- MITRE ATT&CK Framework
- SANS Threat Hunting Poster
- Sqrrl Threat Hunting Reference Guide
- Elastic Security Documentation

Appendix B: Reference Material

Active Directory Cheat Sheet

Common Event IDs for Threat Hunting

Event ID	Description
4624	An account was successfully logged on
4625	An account failed to log on
4634	An account was logged off
4648	A logon was attempted using explicit credentials
4672	Special privileges assigned to new logon
4688	A new process has been created
4697	A service was installed in the system
4720	A user account was created
4722	A user account was enabled
4723	An attempt was made to change an account's password
4724	An attempt was made to reset an account's password
4725	A user account was disabled
4726	A user account was deleted
4738	A user account was changed
4740	A user account was locked out
4767	A user account was unlocked
4768	A Kerberos authentication ticket (TGT) was requested
4769	A Kerberos service ticket was requested
4770	A Kerberos service ticket was renewed
4771	Kerberos pre-authentication failed
4776	The computer attempted to validate the credentials for an account
4778	A session was reconnected to a Window Station
4779	A session was disconnected from a Window Station
4781	The name of an account was changed
4798	A user's local group membership was enumerated
4799	A security-enabled local group membership was enumerated

Common Kerberos Encryption Types

Value	Description
0x1	DES-CBC-CRC
0x3	DES-CBC-MD5
0x11	AES128-CTS-HMAC-SHA1-96
0x12	AES256-CTS-HMAC-SHA1-96
0x17	RC4-HMAC
0x18	RC4-HMAC-EXP

Common Service Principal Names (SPNs)

Service	Example
HTTP	HTTP/webserver.domain.com
MSSQL	MSSQLSvc/sqlserver.domain.com:1433
CIFS	CIFS/fileserver.domain.com
LDAP	LDAP/dc.domain.com
HOST	HOST/workstation.domain.com

Kerberoasting Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4769
AND TicketEncryptionType = "0x17"
AND ServiceName NOT LIKE "$"
```

AS-REP Roasting Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4768
AND PreAuthType = "0"
```

DCSync Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4662
AND Properties LIKE "%1131f6aa-9c07-11d1-f79f-00c04fc2dcd2%"
```

Golden Ticket Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4769
AND TicketEncryptionType = "0x17"
AND ServiceName = "krbtgt"
```

Silver Ticket Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4769
AND TicketEncryptionType = "0x17"
AND ServiceName NOT LIKE "krbtgt"
```

Pass-the-Hash Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4624
AND LogonType = "3"
AND AuthenticationPackageName = "NTLM"
```

Pass-the-Ticket Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4624
AND LogonType = "3"
AND AuthenticationPackageName = "Kerberos"
```

Overpass-the-Hash Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4624
AND LogonType = "3"
AND AuthenticationPackageName = "Kerberos"
AND LogonProcessName = "NtLmSsp"
```

Skeleton Key Detection Query

```
SELECT * FROM SecurityEvent
WHERE EventID = 4673
AND PrivilegeList = "SeTcbPrivilege"
```

Pro Tip: Always test your queries in a non-production environment before deploying them to production.

Cloud Cheat Sheet

AWS CloudTrail Event Names

Event Name	Description
CreateUser	A new IAM user was created
DeleteUser	An IAM user was deleted
CreateAccessKey	A new access key was created
DeleteAccessKey	An access key was deleted
AttachUserPolicy	A policy was attached to an IAM user
DetachUserPolicy	A policy was detached from an IAM user
CreateRole	A new IAM role was created
DeleteRole	An IAM role was deleted
AttachRolePolicy	A policy was attached to an IAM role
DetachRolePolicy	A policy was detached from an IAM role
CreateLoginProfile	A password was created for an IAM user
DeleteLoginProfile	A password was deleted for an IAM user
UpdateLoginProfile	A password was updated for an IAM user
CreateGroup	A new IAM group was created
DeleteGroup	An IAM group was deleted
AddUserToGroup	A user was added to an IAM group
RemoveUserFromGroup	A user was removed from an IAM group
CreateInstanceProfile	A new instance profile was created
DeleteInstanceProfile	An instance profile was deleted
AddRoleToInstanceProfile	A role was added to an instance profile
RemoveRoleFromInstanceProfile	A role was removed from an instance profile

Azure Activity Log Operations

Operation	Description
Microsoft.Authorization/roleAssignments/write	A role assignment was created
Microsoft.Authorization/roleAssignments/delete	A role assignment was deleted
Microsoft.Authorization/roleDefinitions/write	A role definition was created
Microsoft.Authorization/roleDefinitions/delete	A role definition was deleted
Microsoft.Compute/virtualMachines/write	A virtual machine was created
Microsoft.Compute/virtualMachines/delete	A virtual machine was deleted
Microsoft.Compute/virtualMachines/start/action	A virtual machine was started
Microsoft.Compute/virtualMachines/restart/action	A virtual machine was restarted
Microsoft.Compute/virtualMachines/deallocate/action	A virtual machine was deallocated
Microsoft.Network/networkSecurityGroups/write	A network security group was created
Microsoft.Network/networkSecurityGroups/delete	A network security group was deleted
Microsoft.Network/networkSecurityGroups/securityRules/write	A network security group rule was created
Microsoft.Network/networkSecurityGroups/securityRules/delete	A network security group rule was deleted
Microsoft.Storage/storageAccounts/write	A storage account was created
Microsoft.Storage/storageAccounts/delete	A storage account was deleted
Microsoft.Storage/storageAccounts/listKeys/action	Storage account keys were listed
Microsoft.Storage/storageAccounts/regenerateKey/action	A storage account key was regenerated
Microsoft.KeyVault/vaults/write	A key vault was created
Microsoft.KeyVault/vaults/delete	A key vault was deleted
Microsoft.KeyVault/vaults/secrets/write	A secret was created
Microsoft.KeyVault/vaults/secrets/delete	A secret was deleted

GCP Audit Log Methods

Method	Description
SetIamPolicy	An IAM policy was set
CreateServiceAccount	A service account was created
DeleteServiceAccount	A service account was deleted
CreateServiceAccountKey	A service account key was created
DeleteServiceAccountKey	A service account key was deleted
CreateRole	A custom role was created
DeleteRole	A custom role was deleted
UpdateRole	A custom role was updated
CreateFirewall	A firewall rule was created
DeleteFirewall	A firewall rule was deleted
PatchFirewall	A firewall rule was patched
CreateInstance	A virtual machine instance was created
DeleteInstance	A virtual machine instance was deleted
StartInstance	A virtual machine instance was started
StopInstance	A virtual machine instance was stopped
CreateBucket	A storage bucket was created
DeleteBucket	A storage bucket was deleted
SetBucketIamPolicy	A storage bucket IAM policy was set

Pro Tip: Always test your queries in a non-production environment before deploying them to production.

Industrial Protocols Cheat Sheet

Modbus

Modbus is a serial communication protocol developed by Modicon in 1979. It is used to transmit information between electronic devices. Modbus is a request-response protocol and offers services specified by function codes.

Modbus Function Codes

Code	Description
1	Read Coils
2	Read Discrete Inputs
3	Read Holding Registers
4	Read Input Registers
5	Write Single Coil
6	Write Single Register
15	Write Multiple Coils
16	Write Multiple Registers
23	Read/Write Multiple Registers

Modbus Exception Codes

Code	Description
1	Illegal Function
2	Illegal Data Address
3	Illegal Data Value
4	Slave Device Failure
5	Acknowledge
6	Slave Device Busy
8	Memory Parity Error
10	Gateway Path Unavailable
11	Gateway Target Device Failed to Respond

DNP3

DNP3 (Distributed Network Protocol 3) is a set of communications protocols used between components in process automation systems. It is primarily used in the utility industry, such as electric and water companies.

DNP3 Function Codes

Code	Description
0	Confirm
1	Read
2	Write
3	Select
4	Operate
5	Direct Operate
6	Direct Operate - No Ack
7	Immediate Freeze
8	Immediate Freeze - No Ack
9	Freeze and Clear
10	Freeze and Clear - No Ack
11	Freeze with Time
12	Freeze with Time - No Ack
13	Cold Restart
14	Warm Restart
15	Initialize Data to Defaults
16	Initialize Application
17	Start Application
18	Stop Application
19	Save Configuration
20	Enable Unsolicited Messages
21	Disable Unsolicited Messages
22	Assign Class
23	Delay Measurement
24	Record Current Time
25	Open File
26	Close File
27	Delete File
28	Get File Info
29	Authenticate File
30	Abort File
31	Activate Configuration
32	Authentication Request
33	Authentication Error

Pro Tip: Always test your queries in a non-production environment before deploying them to production.

Sysmon Cheat Sheet

Sysmon Event IDs

Event ID	Description
1	Process Creation
2	A process changed a file creation time
3	Network connection
4	Sysmon service state changed
5	Process terminated
6	Driver loaded
7	Image loaded
8	CreateRemoteThread
9	RawAccessRead
10	ProcessAccess
11	FileCreate
12	RegistryEvent (Object create and delete)
13	RegistryEvent (Value Set)
14	RegistryEvent (Key and Value Rename)
15	FileCreateStreamHash
16	ServiceConfigurationChange
17	PipeEvent (Pipe Created)
18	PipeEvent (Pipe Connected)
19	WmiEvent (WmiEventFilter activity detected)
20	WmiEvent (WmiEventConsumer activity detected)
21	WmiEvent (WmiEventConsumerToFilter activity detected)
22	DNSEvent (DNS query)
23	FileDelete (File Delete archived)
24	ClipboardChange (New content in the clipboard)
25	ProcessTampering (Process image change)
26	FileDeleteDetected (File Delete logged)

Sysmon Configuration Example

```
<Sysmon schemaversion="4.22">
  <HashAlgorithms>sha256</HashAlgorithms>
  <EventFiltering>
    <ProcessCreate onmatch="include">
      <Image condition="contains">powershell.exe</Image>
      <Image condition="contains">cmd.exe</Image>
      <Image condition="contains">wscript.exe</Image>
      <Image condition="contains">cscript.exe</Image>
      <Image condition="contains">mshta.exe</Image>
      <Image condition="contains">rundll32.exe</Image>
      <Image condition="contains">regsvr32.exe</Image>
      <Image condition="contains">wmic.exe</Image>
      <Image condition="contains">bitsadmin.exe</Image>
      <Image condition="contains">certutil.exe</Image>
      <Image condition="contains">msiexec.exe</Image>
      <Image condition="contains">schtasks.exe</Image>
      <Image condition="contains">at.exe</Image>
      <Image condition="contains">net.exe</Image>
      <Image condition="contains">net1.exe</Image>
      <Image condition="contains">whoami.exe</Image>
      <Image condition="contains">ipconfig.exe</Image>
      <Image condition="contains">systeminfo.exe</Image>
      <Image condition="contains">tasklist.exe</Image>
      <Image condition="contains">taskkill.exe</Image>
      <Image condition="contains">sc.exe</Image>
      <Image condition="contains">reg.exe</Image>
      <Image condition="contains">netsh.exe</Image>
      <Image condition="contains">arp.exe</Image>
      <Image condition="contains">nbtstat.exe</Image>
      <Image condition="contains">route.exe</Image>
      <Image condition="contains">ping.exe</Image>
      <Image condition="contains">tracert.exe</Image>
      <Image condition="contains">pathping.exe</Image>
      <Image condition="contains">nslookup.exe</Image>
      <Image condition="contains">ftp.exe</Image>
      <Image condition="contains">tftp.exe</Image>
      <Image condition="contains">telnet.exe</Image>
      <Image condition="contains">ssh.exe</Image>
      <Image condition="contains">scp.exe</Image>
      <Image condition="contains">sftp.exe</Image>
      <Image condition="contains">curl.exe</Image>
      <Image condition="contains">wget.exe</Image>
      <Image condition="contains">vssadmin.exe</Image>
      <Image condition="contains">wbadmin.exe</Image>
      <Image condition="contains">diskshadow.exe</Image>
      <Image condition="contains">esentutl.exe</Image>
      <Image condition="contains">expand.exe</Image>
      <Image condition="contains">extrac32.exe</Image>
      <Image condition="contains">findstr.exe</Image>
      <Image condition="contains">forfiles.exe</Image>
      <Image condition="contains">hh.exe</Image>
      <Image condition="contains">makecab.exe</Image>
      <Image condition="contains">mavinject.exe</Image>
      <Image condition="contains">msbuild.exe</Image>
      <Image condition="contains">msdt.exe</Image>
      <Image condition="contains">msiexec.exe</Image>
      <Image condition="contains">odbcconf.exe</Image>
